Case Study

Hereford Sixth Form

Profile

Hereford Sixth Form College is a co-educational state funded sixth form college in Hereford, England. It offers over 40 subjects at A-Level and 10 at GCSE.

The Challenge

To create a brand-new turnkey solution for an indoor and outdoor training centre to cater for all of its students.

The Solution

Provide an industry leading 3D and high-resolution design to create a state-of-the-art training complex, delivering both indoor and outdoor facilities for all of its students and staff.

The team delivered an outstanding total solution including, flooring, turf track, premium cardio, pin select & plate loaded strength, along with a customised rig and accessories. Furthermore, a bespoke outdoor container and rig was created, delivered and installed to provide students the capability to train outside all year round. To boost engagement, Dyaco® also created and delivered a high spec promotional video, completely free of charge. The feedback from staff and students were impressive and surpassed all expectations.

The Review

“Working with Dyaco on the installation of our college gym has been an outstanding experience from start to finish. The concept they presented was not only innovative but perfectly tailored to our needs, maximising the functionality of a small space, whilst catering for a large student cohort. Throughout the installation process, Dyaco’s professionalism and attention to detail were evident. They helped us to optimise our space to create an environment conducive to fitness and our student well-being. What truly sets Dyaco apart is their exceptional service and value for money, whilst not compromising on quality. Thanks to Dyaco, our students now have access to a state-of-the-art indoor and outdoor gym facility, that not only meets but exceeds our expectations. We couldn’t be happier with the outcome and highly recommend Dyaco for any fitness facility project.”

Ben Parfitt, Physical Well-Being Manager
